A

S Japan modernized during the Meiji Restoration in the late nineteenth century, the Department of Public Works established the Imperial College of Engineering to promote technological studies and engineering as a way to accelerate the advance of architectural studies. Japan had been relying on foreign architects, and this new policy was designed to have Japanese students absorb European architectural skills and techniques. The hope was that they would construct modern architecture that Japan could take pride in and show off to the world.

Josiah Conder was a British architect who taught at the architectural department of the Imperial College of Engineering (now the University of Tokyo’s Department of Architecture). Invited to Japan in 1877, he remained here even after completing his commission and became a permanent resident. Conder designed many buildings—including the Rokumeikan, Iwasaki Residence and Holy Resurrection Cathedral—and was referred to as the “father of Japanese architecture.”

“Besides incorporating European architectural techniques and teaching Japanese architects,” architectural historian Yoshiyuki Kawahigashi says, “Conder also made major contributions by setting principles for constructing foundations on soft soil and enforcing earthquake-resistant construction—both essential for an earthquake-prone country like Japan.”

THE DAWN OF MODERN JAPANESE ARCHITECTURE

Modern Japanese architectural design began to take shape at the end of the Edo Period (1603-1867) and developed in tandem with the Meiji government’s rise. One of the new design movement’s main proponents was Kingo Tatsuno, who revolutionized the way Japan built and lived.

From Meiji to the Present: Looking Back on 150 Years of Progress
Not limiting himself to modern buildings, Tatsuno also created traditional Japanese-style wooden buildings like the Nara Hotel. Despite the traditional temple-like exterior, there are many Western-influenced touches throughout the building, such as vertically sliding windows, pillars framing the walls, and a chandelier. Formally referred to as the “state guesthouse of Kansai,” the hotel was regarded as the perfect place for royalty and government guests to stay.

Tatsuno was one of several new-wave architects and Conder disciples to refashion the look of Meiji Japan. One of his contemporaries, Tokuma Katayama, designed the massive and ornate Togu Palace in Tokyo, showcasing the best architectural skills, aesthetics and technology of Japan at the time. Known as the Versailles of Tokyo, the palace was the high point of modern European-style architecture achieved during the Meiji Period. Now known as the Akasaka Palace, it serves as the State Guest House, welcoming dignitaries from all over the world. The State Guest House is sometimes open to the public, and visitors can see the marvelous structure and the many fine artworks on display firsthand.

Josiah Conder taught his pupils about European architecture, the starting point from where they went on to create their own Western-influenced styles that became the basis of modern Japanese architecture. Tatsuno, Katayama and other key architects used what they learned from him to continue to strive to create national buildings that harmoniously fused Japanese and Western sensibilities and have stood strong for well over a century.
